

EMPLOYEE TRAINING RECORD

TRAINING TITLE **BBQ General Precautions**

KEY TEACHING POINTS

General Precautions

- All barbecues must only be used outdoors.
- Do not block any exit or use on a balcony.
- Keep barbecue away from combustible surfaces and buildings. It is dangerous to operate unit within 3 meters (10 feet) of combustible wall or window (open or closed) of a building

Charcoal Barbecues

- Use only barbecue lighting fluid on charcoal. Read lighter instructions. Usually coals should be soaked in fluid 5 minutes before attempting to light up.
- Do not use kerosene, gasoline or naphtha as lighting fluid.
- Never add more lighting fluid when the flames have started. A flame may travel up and ignite the whole can.
- Keep a bucket of water handy.
- Smother the smouldering coals with a lid and let sit overnight. Stir the coals before leaving them and douse with water. Do not empty coals in garbage until next day.

Propane Barbecues

- A propane safety video available from Safety Office is recommended for training of propane barbecue operators.
- Before taking a barbecue indoors for storage remove the cylinder and leave it outside. It is unlawful to take a propane cylinder which contains, or has contained propane, indoors.
- Never put a propane cylinder in a closed vehicle. When transporting it, secure the cylinder in an upright position to prevent tipping. If transporting within passenger compartment secure cylinder and leave windows open.
- A special plug should be threaded into the outlet of the service valve and remain in place whenever the cylinder is not in use.
- Keep fire extinguisher (minimum rating 5 lbs ABC) near unit.

TEST

QUESTION	ANSWERS	
	TRUE	FALSE
1 All barbecues must only be used outdoors.		
2 Keep fire extinguisher (minimum rating 5 lbs ABC) near unit.		
3 Never put a propane cylinder in a closed vehicle.		
4 Do not use kerosene, gasoline or naphtha as lighting fluid.		
5 Keep a bucket of water handy for charcoal BBQs.
