

EMPLOYEE TRAINING RECORD		
TRAINING TITLE	Comminutors and Barminutors	
KEY TEACHING POINTS		
<p>When working around comminutors and barminutors, use safe procedures and be aware of safety hazards. Wet walkways and dewatered channels are slippery. Take appropriate precautions so you don't slip and fall while attempting to remove floatables which did not pass through the comminutor or barminutor from the surface of the water.</p> <p>Never attempt to unplug or unjam the cutter blades without first turning off the unit and locking out and tagging out the unit in accordance with the lockout/tagout policy. The moving parts of a comminutor can quickly cut off a finger and the rotating drum of a barminutor could easily cut you. Treat this equipment with respect. Do not attempt to repair or troubleshoot electrical equipment and controls unless you are qualified and authorized to do so.</p>		
TEST		
QUESTION	ANSWERS	
	TRUE	FALSE
1. A comminutor can easily cut off a finger before you can remove your hand.		
2. Treat comminutors and barminutors with respect.		
3. It is not important to hose down the area you are working in because it can't become slippery.		
4. You must be aware of safety hazards at all times.		
5. You must be both qualified and authorized to lockout and tagout equipment.
