

EMPLOYEE TRAINING RECORD

TRAINING TITLE Moldboard Plows

KEY TEACHING POINTS

OPERATION.

- To avoid injury, always be careful while operating a tractor and plow.
- For tractor stability and operator safety, tractor front end weights are required.
- Never permit any person other than the operator on the tractor.
- Never ride, or permit others to ride, on the plow.
- Do not grease, oil, or adjust the plow while it is in motion.
- When indexing the plow, be sure no one is in the plow indexing path.
- Lower the plow to within two inches of the ground before releasing quick coupler latch handles.
- When the plow is in a raised position, be sure rockshaft and remote cylinder operating levers are not bumped or touched by anyone.
- Always lower the support stand to help support the plow before unhitching from the tractor.
- Always lower the plow when not in use. Move the selective control lever back and forth to relieve pressure in cylinder and hoses.

HYDRAULIC OIL.

- Escaping hydraulic oil under pressure can have sufficient force to penetrate the skin, causing serious personal injury. Before disconnecting lines, be sure to relieve all pressure. Before applying pressure to the system, be sure all connections are tight and that lines, pipes and hoses are not damaged. Hydraulic oil escaping from a very small hole can be almost invisible. Use a piece of cardboard or wood, rather than hands, to search for suspected leaks.
- If injured by escaping fluid, see a doctor at once. Serious infection or reaction can develop if proper medical treatment is not administered immediately.

TRANSPORTING.

- To transport, raise the plow with rockshaft control lever. Transport the plow bottoms in the right-hand plowing position only.
- A plow should be transported at a maximum speed of 10 mph.
- When transporting a plow on a road or highway at night or during the day, use accessory lights and devices for adequate warning to operators of other vehicles.

TEST

QUESTION	ANSWERS	
	TRUE	FALSE
1 To avoid injury, always be careful while operating a tractor and plow.		
2 Never ride, or permit others to ride, on the plow.		
3 Always lower the support stand to help support the plow before unhitching from the tractor.		
4 Always lower the plow when not in use.		
5 Transport the plow bottoms in the right-hand plowing position only.
