

EMPLOYEE TRAINING RECORD

TRAINING TITLE To Avoid Skidding

KEY TEACHING POINTS

INTRODUCTION.

- Winter driving is not an excuse for an accident, it is a challenge to your driving ability.
- Wet roads require 50 times more distance in which to stop, and ice 10 times more distance.

HERE ARE SOME TRICKS FOR BAD WEATHER DRIVING.

- Drive at a safe speed for weather, traffic and road conditions.
- Maintain on wet roads at least twice the safe following distance for dry pavement or two car lengths for every 10 miles of speed.
- Make smooth gradual turns and gradual stops by pumping the brakes lightly when slowing down. Don't let the wheels lock.
- Rein your reflexes. You can't automatically twist the wheel or slam on your brakes to squeak out of a tight spot.
- Expect ice on bridges, at an underpass or on the shady side of a hill. Intersections can be more slippery and extra hazardous.
- Slow down before entering a turn while on the straightaway.
- Beware of one bald tire or uneven brakes. Such conditions can quickly throw you into a skid.
- Always drive with your low headlights on. This will let others know where you are if vision is impaired.

TEST

QUESTION	ANSWERS	
	TRUE	FALSE
1 Slow down before entering a turn while on the straightaway.		
2 Don't let the wheels lock.		
3 Always drive with your low headlights on.		
4 Maintain on wet roads at least twice the safe following distance for dry pavement or two car lengths for every 10 miles of speed.		
5 Drive at a safe speed for weather, traffic and road conditions.
